

THE IMPORTANCE OF WATER SAVING WATER.

Water is one of the earth's most precious resources. For the sake of your family and the survival of our future generations, here are some reasons why saving water is important.

Reason 1

Without fresh water we would die in just a few days. It is a simple morbid fact that helps drive the point across. Water equals life.

Reason 2

Using less water keeps money in your pocket. By utilizing basic water conservation techniques you are able to save lots of money.

Reason 3

Water conservation is critical for the environment especially for the survival of endangered species.

Reason 4

Saving water saves energy. In order to pump water from a central facility, water/energy is required.

Reason 5

Water conservation can reduce the occurrence of sinkholes.

Soldiers and gentlemen, I hope we can all start saving water today!

morning team actions shift to save a road
the viaduct may be sites shift to 200m
over, another one shift to 100m
21. below grade poly another some end
the road

3 hours

try my site below the road next month
fort fort bidon sigma 6 is 1L. about a
days below 200m. though shift some again
21.

3 hours

about how many years now 2001 point
reinforcement corrosion rates possible
when to add some or add the
you are

hours

removing site for location a corrosion
can probably to have shift not
accessible

hours

around 200m at year 2000 to date or
when it has a central facility
more from a leader

hours

more corrosion can escape the
of experience

How can we save water?

- We can save water by closing taps that are not in use.
- Close the tap when (fleat) cleaning your teeth.
- Fix leaking taps immediately.
- Think before running your glass under a running tap.
- Use a bucket of water to wash your car, (instead) instead of a hosepipe.
- Put a bucket out when it is raining to collect the water, you can reuse the rain water because it is clean water.
- Cover your swimming pool to prevent water evaporation.
- We are also killing out marine life, and soon enough it will be dying out. Those are just some ways to save water in our daily lives. Encourage others to start saving water today!

Water Pollution

Before the 19th century people lived in harmony with their immediate environment. But as industrialization spread around the world, so has the problem of pollution. There are many things that pollute water. But the main things are oil, litter and chemicals. When people throw their papers, bottles etc. out of the windows, the wind then blows them into the dams, rivers, lakes and the ocean. Then the fish thinks it's food and eats it. It then starts threatening life. Once it pollutes the water, it starts polluting the air and it can affect human life too. Most rural areas do not have proper toilets so they use the dams, lakes and rivers. People also wash their clothes in there, making the water even worse. Some areas do not have access to (ed)water, so they drink the water from the dams, rivers and lakes making them very sick.

We can stop this pollution problem by not littering. It can make a huge difference.

Introduction

It being Water Week we are going to be talking about ways to save water and the importance of water. We are also going to be speaking about water pollution.

We waste too much water in our everyday lives. Scientist predict that by 2025 $\frac{1}{3}$ of the world will be without water. We can change that if we start saving water. We suffer from dehydration when it's hot because we don't drink. How will our future generations feel because it's only getting hotter! We are also killing our marine life. We would like our future generations to know the beauty of water and marine life the way we do today. Start with the small with the small things and make it a habit in your daily lives. Start saving water today to save the future of our Planet.

Conclusion

We have each spoken about water. We hope that you can take this with you and implement it in your daily lives. We hope you will encourage others around you to save water as well. Save water if you want our future generations to know marine life and for them to have clean water. On behalf of the Science Club thank you for your time
